December 11, 2012

Dear Representative:

The undersigned members of the Ad Hoc Group for Medical Research, which represents patients, scientists, and health care providers, are gravely concerned about the impact of continued cuts, including sequestration, on medical research supported by the National Institutes of Health (NIH) and the subsequent negative consequences for the health of all Americans.

The Office of Management and Budget (OMB) has estimated that sequestration will reduce non-defense discretionary spending in FY 2013 by 8.2 percent. For NIH, this will represent a $2.5 billion reduction. At a time when we should be investing more in this agency, which spurs job creation and economic growth, the impact of an 8.2 percent cut on NIH-funded research will be immediate and devastating. Testifying March 28 before the Senate Labor-HHS-Education Appropriations Subcommittee, NIH Director Francis Collins stated that sequestration will force NIH to fund approximately 2,300 fewer research grants in FY 2013, representing one quarter of new and competing grants the agency expects to fund. As a result, he indicated, success rates for new applications and competing renewals will fall “to historically low levels.”

On June 21, before the House Energy and Commerce Subcommittee on Health, Dr. Collins characterized the magnitude of sequestration on NIH research: “With $2.4 billion being removed from the budget, there’d be no way to actually spare any field of medical research from at least some degree of cut.”

Even more troubling is that sequestration will come at the end of a decade that has seen the NIH budget fall by nearly 20 percent after inflation, and on top of an additional $900 billion in discretionary spending cuts mandated by the BCA over the next decade.

The Ad Hoc Group and its members also are concerned that continued cuts will negatively affect job creation and seriously jeopardize America’s leadership in medical research. An analysis released in April by the Federation of American Societies for Experimental Biology (FASEB) states, “Since at least 75 percent of the grant budgets are for salaries, the impact on employment and local economies will be immediate and
severe.” A March report from United for Medical Research estimates a 7.8 percent reduction in the NIH budget will “result in 33,000 fewer jobs across the U.S. and a $4.5 billion decrease in economic activity.” In May, Research!America warned that sequestration will negatively impact U.S. competitiveness just as other nations are aggressively boosting their investments in research and development.

If we are to address the health challenges of an aging and increasingly diverse population, and remain a vibrant force in the global economy, America needs more investment in medical research, not less. The members of the Ad Hoc Group urge Congress and the Administration to work together on a solution that avoids sequestration and the devastating impact of across-the-board cuts.

Sincerely,
